

THE LEADING PLATING TECHNOLOGY  
FOR HIGHEST DEMANDS

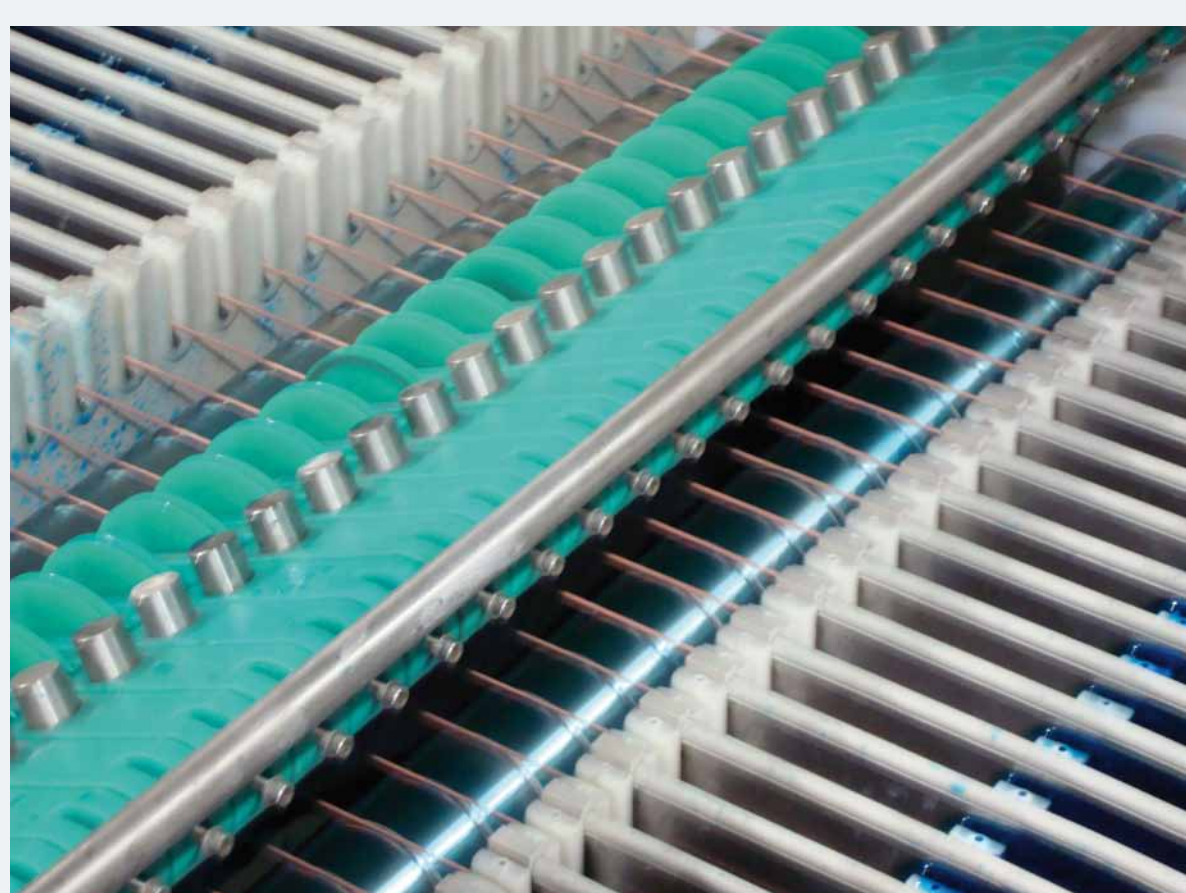

# CELLRAC

- Single Cell Control of Current for Constant Deposit within Narrowest Tolerances.
  - Highest surface quality and optimal all around plating of the wire
- The only plating plant for parallel wires with controlled current density

Example of application:

Brass plating lines for the production of high-quality steel cord and saw wire

- Radical reduction of the wear of the drawing dies and the wire breaks in the wet drawing process
- Minimization of anode scrap, rejects and personnel costs
- Highest quality of the end product

TECHNOLOGIES FOR EXCELLENCE
